Item code: Fess.54
(Fess.54.s06.m1.r1)

Collection

FESS displays a new concept of convivial space. Inspired by the shape of a weeping willow, it reinterprets the richly decorated ancient berceau. Its aluminum frame makes it adaptable for private residences as well as public spaces.

It transforms into a shelter for the hottest hours of the day or for an outdoor dinner. Swayed by the wind that moves its perimeter made of woven cord and fabric, Fess is available in various shades of green. A tactile and poetic rendition that evokes the atmosphere of the desert.

LIGHT BEIGE

Aluminum is a light weight and strong metal with an excellent strength-to-weight ratio and corrosion resistance. These properties make it an ideal material for outdoor furniture. Although aluminum is the most popular material for outdoor furniture, despite being light weight, it is durable and can be easily processed into various complex shapes.

PERFORATED SHEET

Aesthetic Effects

ALUMINUM

Aluminium is a light and strong metal with excellent strength-to-weight ratio and corrosion resistance. These properties make it an ideal material for outdoor furniture. Despite its light weight, aluminium is durable and is coated with polyester electrostatic powder coating for added protection against knocks and scratches and to add colour to the product. As the powder coating adheres better to the metal, it also makes the product much more resistant to fading. JOTUN and Akzo Nobel branded powder coatings are used in YAAZ aluminium products.

ALUMINUM COATING

JOTUN powder coatings used in YAAZ products have been tested against high amounts of UV radiation and strong winds. In addition, powder coatings have been tested in some of the hottest, most humid and corrosive environments in the world, such as Southeast Asia and the Middle East.

CONCRETE COATING

The stone effect paint collection, developed with the cement spraying method, offers a great alternative for aesthetic surfaces in outdoor products.

Cleaning and Using Instructions

Over time with exposure to the elements, powder coatings may show signs of weathering such as loss of gloss, chalking and slight colour change. A simple regular clean will minimize the effects of weathering and will remove dirt, grime and other build-up detrimental to all powder coatings.

For any particular region or territory, there may be local regulations or local requirements to be met in order to achieve conformance to certain published quality labels or standards. It is the users' responsibility to be aware of such standards.

Failure to comply with the recommended cleaning schedule will nullify any warranties.

Cleaning should start at the time the products are installed, ensuring that construction materials such as concrete, plaster and paint splashes are removed before they have a chance to dry. Failure to remove these materials at this early stage will require the use of aggressive cleaning materials and techniques with potential damage to the powder coated surface.

Best cleaned by regularly washing the coating using warm water and a non-abrasive, pH neutral detergent solution. Surfaces should be rinsed thoroughly after cleaning to remove all residue. All surfaces should be cleaned using a soft cloth or sponge or something harder than a soft natural bristle brush.

If the project is subject to any hazardous unusual environmental factors, or is close to salt water, an estuary or marine environments then YAAZ must be consulted on an individual project basis.

Renovation can be required in the case of heavy soiling (due to lack of maintenance).

In no circumstance should any abrasive cleaner or polish, or any cleaner containing ketones, esters be used.

PERFORATED SHEET

Durable Perforated Sheets Offer Cleaning, Acoustic, Electric, Magnetic, and/or decorative hole patterns and available in many materials, colors, and sizes. Our custom perforations are carefully selected for our collection.

Cleaning and Using Instructions

For regular cleaning, wipe the aluminum finishes with a soft cloth or sponge and avoid detergent solutions.

To remove any stains or grime buildup, use non-abrasive cleanser and a soft-bristled brush.

Avoid using steel wool or abrasive cleaners, as these can scratch the surface of the aluminum.

Rinse the finishes thoroughly with clean water and wipe it dry with a clean, dry cloth.

For extra protection, apply a coat of wax to the aluminum surface. This will help to protect the finishes from the elements and keep it looking new.

Do not place heavy objects on the aluminum finishes, as this can cause dents or damage to the surface.

Avoid dragging the finishes on rough or uneven surfaces, as this can scratch the aluminum.

Do not expose the finishes to extreme weather conditions, such as heavy rain or extreme heat. If possible, store the finishes indoors or under appropriate cover when not in use.

If the finishes become too hot to touch, allow it to cool down before using it.

By following these cleaning and usage instructions, you can help ensure that your aluminum finishes always look good and ready for use.

YAAZ ROPES

We have created a vibrant collection using our YAAZ synthetic outdoor manufacturing process.

With the use of advanced special physical dyeing procedures, the yarns in our YAAZ synthetic rope line collection provide high protection against sun and weather conditions, as well as exceptional color fastness and strength.

Our design team has carefully selected and produced a color palette that can be easily combined with our aluminum frame colors. YAAZ synthetic rope line colors will give a brand new dimension to rope accessories that are popular in outdoor leisure activities.

Cleaning and Using Instructions

Use the rope line(s) regularly with a soft cloth or scrub-bristled brush to remove any loose dirt or debris.

For deeper cleaning, use a solution of mild soap and warm water. Gently scrub the rope with a soft-bristled brush, then rinse thoroughly with clean water.

Avoid using harsh chemicals or abrasive cleaners, as these can damage the rope and cause discoloration or fading.

Allow the furniture to dry completely before using it again.

Do not exceed the weight capacity of the furniture. Check the weight limit periodically by the manufacturer and avoid placing heavy objects on the furniture.

Avoid dragging or scraping the furniture on hard surfaces, as this can damage the rope and the frame.

Do not use the furniture in extreme weather conditions, such as heavy rain or high winds.

If possible, store the furniture indoors or under a protective YAAZ cover when not in use to extend its lifespan.
